

Upholstered furniture can contain Persistent Organic Pollutants, which are highly toxic chemical substances. They can present a serious health threat to both humans and wildlife which is why specialist collection and disposal is required.

If your business produces this type of waste, you need our **POPs waste** service

Wooden forks and paper plates, toothbrushes and your phone case. Biodegradable packaging can easily contaminate good quality recycling, which is why it should be segregated out into its own bin.

If your business produces this type of waste, you need our **biodegradable waste** service.

Unfortunately, most ceramics are unrecyclable as they are made of a blend of mixed materials and also contaminate other recyclables.

If your business produces this type of waste, you need our **general waste** service

DVD cases are generally made of mixed plastics which makes them challenging to recycle. Why not try donating them, so they don't go to waste?

If not, you need our **general waste** service.

Electrical items contain a complex mix of materials, some of which are hazardous. Due to the nature of the components, careful recovery is required to protect people and the environment.

If your business produces this type of waste, you need our **hazardous waste** service.

Food waste will spoil your recyclable materials, like paper and card, which cannot be cleaned. Keep your recycling bin fresh and clean by tossing out food waste separately.

If your business produces this type of waste, you need our **food waste** service.

If your operations involve the use of Gas Cylinders, it's imperative to consider responsible disposal methods. Disposing of gas canisters incorrectly poses significant risks to recycling facilities and workers.

If your business produces this type of waste, you need our **hazardous waste** service.

Metal hangers with their curved ends disrupt recycling equipment, complicating the sorting process. Wooden hangers treated with varnish or other finishes are entirely non-recyclable and plastic hangers are often composed of mixed materials making their recyclability difficult.

If your business produces a significant number of hangers, you need a **dedicated** service.

Every pressurised Metered Dose Inhaler (pMDI) thrown away is full of hugely polluting hydrofluorocarbon (HFC) gases. Help us safely capture those gases and repurpose them for use in the refrigeration industry by using our inhaler service.

If your business produces this type of waste, you need our **hazardous waste** service

Textile waste in the recycling bin? Knot a chance!

If your business produces this type of waste, you need a **dedicated** service. But if the items are still usable, we recommend donating the items to a charity shop or dropping them off at a clothing bank.

The good news is that the cardboard tube in the centre is highly recyclable. The bad news is that the rest of your kitchen roll is not. Kitchen roll sheets clean all kinds of spills and surfaces, so they're usually contaminated with mess, food, and cleaning products.

If your business produces this type of waste, place it in the **general waste** bin.

Lithium-ion batteries are shockingly more common than you'd think. They're found in various everyday products from laptops and tablets to mobile phones, power tools and wireless headphones. Lithium-ion batteries are highly flammable and can ignite if they're not recycled correctly.

If your business produces this type of waste, you need our **hazardous waste** service.

Even beautiful people can crack mirrors. While glass can be melted down and remoulded into new products, the reflective coating on mirrors makes them unrecyclable. Since they both have different melting points, mixing mirror glass with bottle glass will render the whole bulk unusable.

If your business produces this type of waste, place it in the **general waste** bin.

Disposable nappies contain polypropylene, adhesives, elastics and absorbent polymers, resisting breakdown. These single-use nappies, used or not, should never enter recycling bins as they can contaminate entire recycling loads.

If your business produces this type of waste, you need our **clinical waste** service.

Book covers can contain plastic film, and the adhesive that binds the book together can't always be removed during the recycling process.

If your business produces this type of waste, you need a **dedicated** service.

Paint disposal is not something to brush off. Whether it's a full tin or a few drops, some tins and paint are classed as hazardous waste and require special treatment at a licensed facility.

If your business produces this type of waste, you may need our **hazardous waste** service.

Unless it's a handmade gift, old quilts may clash with your office décor. They can't be returned, and diverse fabrics prevent recycling. Plastic coatings hinder proper recycling. Stains like spills or bodily fluids complicate matters.

If your business produces large amounts of this type of waste, you need our **bulky waste** service.

Just because they're seemingly made of paper, doesn't mean they can go in a recycling bin. Most receipts are printed on shiny, thermal paper which is non-recyclable and could end up creating poor-quality new products.

If your business produces this type of waste, place it in your **general waste** bin.

Menstruation is a natural part of life, but incorrectly disposing of sanitary products can lead to environmentally damaging plastic pollution in our rivers, oceans and beaches. Sanitary waste should be securely wrapped and disposed of in a dedicated bin.

If your business produces this type of waste, you need our **clinical waste** service.

Cups may be predominantly made of paper, but they're treated with a wax coating which makes them challenging to recycle. Not to mention that any liquids left in the cups will contaminate the rest of your recycling.

If your business produces this type of waste, you need our **coffee cup** recycling service.

Chemicals, whether they have been opened or not, are classed as hazardous waste and require additional segregation.

This type of waste is frequently found in schools, universities and research laboratories.

If your business produces this type of waste, you need our **hazardous waste** service.

'Juil' find a vape shop on almost every high street. Three million vapes are binned in the UK every week. Unfortunately, vape kits contain lots of complex materials and are completely non-recyclable.

If your business produces this type of waste, you need our **hazardous waste** service.

Confectionary and crisp wrappers are typically made of a metallised plastic film that can't be put in the recycling bin.

If your business produces this type of waste, you need our **general waste** service.

Leftover fireworks, even completely unopened, are coated with chemicals, fuels and oxidisers that can't be recycled with other metals.

If your business produces this type of waste, you need our **hazardous waste** service.

Unfortunately, the knitty gritty truth is that old yarn can't just be put in the recycling bin and built into a new ball.

If your business produces a significant amount of yarn, you may need a **dedicated** service.

Unfortunately, sticky labels, food contamination and chemical residue cause quality issues in the recycling process.

If your business produces this type of waste, place it in your **general waste** bin.
